

WatchGuard® System Manager

Unified Management Console for Firebox® X VPN and Security Services

Intuitive Management for Firebox® X Appliances and Security Services

WatchGuard® System Manager provides administrators of growing, complex network environments with a powerful, intuitive interface to centrally manage multiple Firebox® X Unified Threat Management (UTM) appliances and services, including firewall, VPN, security applications, and appliance software updates.

- Send simultaneous global configuration and firmware updates to all of your Firebox X Edge appliances, either immediately or on a scheduled basis
- View all the appliances in your enterprise at a glance, and launch monitoring or configuration tools as desired for pinpoint control of any device or service
- Reduce configuration time with smart, out-of-the-box defaults
- Immediately see and understand what's happening in your network, and take instant preventive or corrective action with interactive, real-time monitoring
- Create secure site-to-site VPN tunnels with just 3 steps, saving time and frustration
- Manage security services such as Gateway AntiVirus/Intrusion Prevention Service (AV/IPS), spamBlocker, or WebBlocker with no separate management software to purchase or maintain
- With flexible use of objects, simplified services configuration, and customizable reports, WatchGuard makes it easy to tailor your system to your business needs

Unified Management Console

WatchGuard System Manager offers centralized management of multiple Firebox X appliances and security services (including global configuration and firmware updates for Firebox X Edge endpoints), with no extra product to buy. Additionally, you can view all the appliances in your enterprise at a glance, and launch monitoring configuration logging or reporting tools for pinpoint control of any device or service - from the original SOHO models up to the Firebox X Peak™.

Intuitive Graphical Interface

A strong configuration delivers better security. WatchGuard System Manager configuration tools are visually oriented and thoughtfully laid out based on common tasks - the building

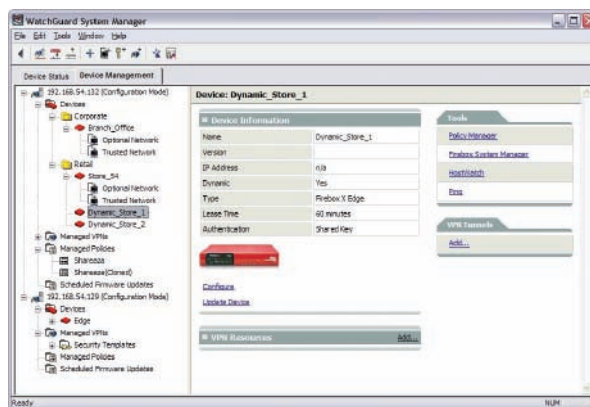

Security Management Without the Confusion

WatchGuard System Manager is the software used to configure and manage Firebox X UTM appliances and services, such as Gateway AV/IPS, spamBlocker, and WebBlocker.

- An intuitive user experience provides indispensable ease-of-use for novice network administrators, while advanced controls empower the expert user
- Smart defaults are pre-defined, ensuring strong security from the start and saving valuable configuration time
- Drag-and-drop VPN and configuration deployment,* intuitive wizards, and flexible administrative choices provide more security with less effort, making it easy to tailor configurations to meet specific business requirements
- Real-time monitoring and comprehensive reporting provide a deep understanding of security and network activity

blocks of a robust security policy. Smart defaults provide strong security right from the start, saving valuable configuration time and effort while advanced, granular controls empower the expert user.

- Streamline policy creation with optional time-savers such as wizards, aliases, and QoS objects
- Order rules manually or automatically
- Craft a configuration offline and deploy it when most convenient - or save quick changes to the box immediately

Flexibility, clarity, smart defaults, and advanced controls all help you build sturdy, comprehensive security policies.

Interactive Real-time Monitoring

Better comprehension yields better security. Clear, visually driven interfaces and plain-English log messages make it easy to validate that the security policy is working as desired, and to make changes or adjustments as desired.

Interactive monitoring enables you to take instant preventive or diagnostic action directly from the interface, without the need to go back through configuration screens.

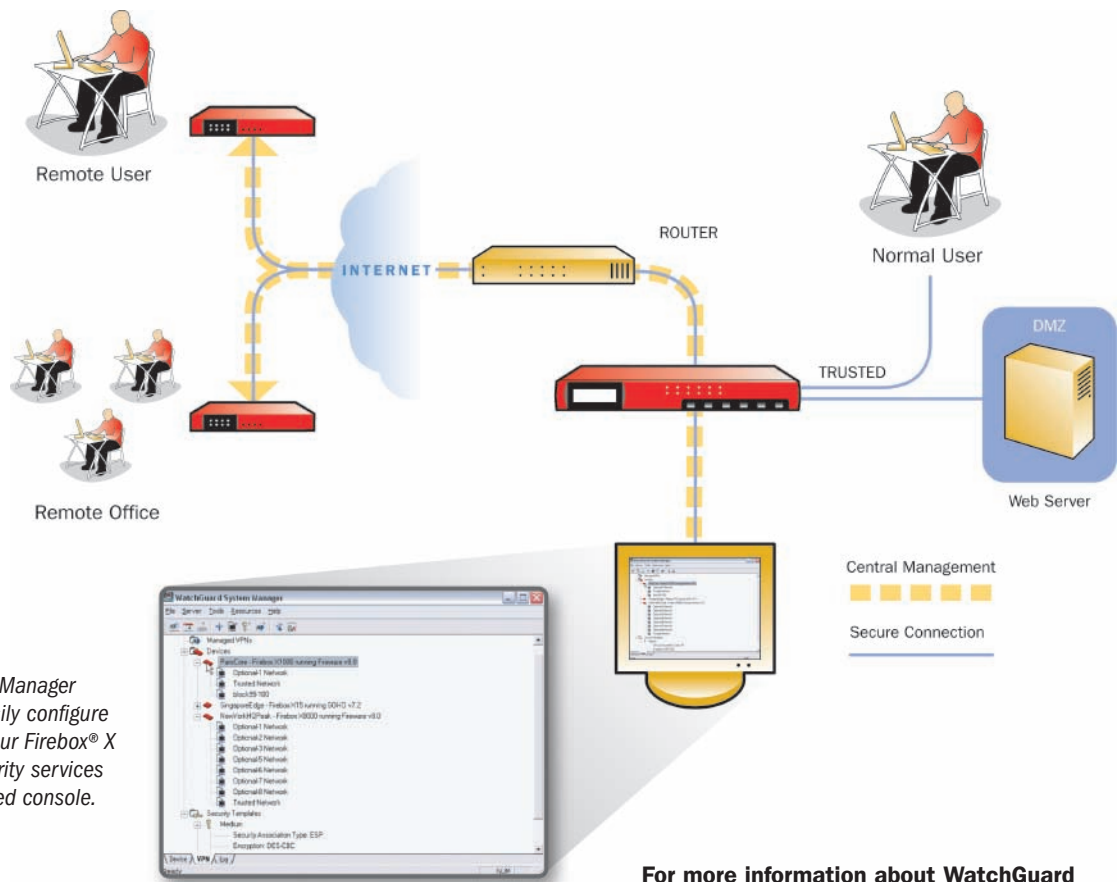

Simple, Drag-and-Drop Management

WatchGuard drag-and-drop management shrinks the time and effort needed to create centrally managed security configurations, and Branch Office VPN tunnels among Firebox X and SOHO appliances – even those with dynamic IP addresses. View, edit, and create security policies and tunnels across the enterprise from a single management console. Install all necessary servers and management software on a single PC if desired, for a complete solution on one work station - with no need for installation and maintenance of dedicated gateway appliances or third-party database software.

Logging and Reporting

Secure, centralized logging and comprehensive reporting are included in WatchGuard System Manager, bundled with all Firebox® X Core™ and Peak™ models - with no extra logging or reporting modules to buy. XML based, human-readable logging is easy to understand, allows integration with third-party reporting tools, and is encrypted for security. Full-featured reporting facilitates in-depth analysis of network activity, security threats, and user behaviors.

Centralized Management with WatchGuard System Manager

WatchGuard System Manager software lets you easily configure and manage all of your Firebox® X appliances and security services from within one unified console.
